

Vaje iz Kvantne mehanike I  
**Komutatorji in eksponenti operatorjev**

15.3.2006

Pokaži, da velja zveza

$$\exp(\hat{A} + \hat{B}) = \exp(\hat{A}) \exp(\hat{B}) \exp(-[\hat{A}, \hat{B}] / 2), \quad (1)$$

če velja  $[\hat{A}, [\hat{A}, \hat{B}]] = 0$  in  $[\hat{B}, [\hat{A}, \hat{B}]] = 0$ . Namig: zapišimo operator

$$\hat{f}(t) = \exp(t(\hat{A} + \hat{B})) \exp(-t\hat{A}) \exp(-t\hat{B}), \quad (2)$$

odvajajmo ga po  $t$ , ga spravimo v obliko  $d\hat{f}(t)/dt = \hat{f}(t)\hat{C}$  in integriramo dobljeno enačbo.
